Setting up email alerts for journals in The Electronic Journal Center (EJC) database

**Step 1**
Go to the Electronic Journal Center (EJC) database. All library databases can be accessed by clicking on Find It ➔ Databases ➔ Databases by Name from the Library home page.

Databases

Databases provide information in the form of journal and magazine articles, industry profiles, country information, human resource management sources, and business information including company profiles, annual reports, and financial ratios. Information is presented in multiple formats, including HTML, PDFs, streaming video, images, and more.

Why would I use library databases?

Databases will assist you in locating needed information to successfully complete your research and assignments. The information is organized in a manner for easy access and includes reliable, scholarly, historically relevant, and diverse information for your needs. Online databases not only give you access to a wealth of information, but also provide the convenience of an online environment accessible anywhere.

Click on the corresponding letter of the database name. If you are off-campus you will be prompted to enter your myFranklin info.
Step 2 You must be logged in to your account in the EJC. If you do not have an account, you can quickly create one. Tip: you can use your myFranklin info to make it easy to remember.

Step 3 Type the name of the journal for which you want to receive email alerts. Make sure to put the title in quotes, change the search field to Journal Title, and click Submit Search.

Step 4 From the results page, click on the journal title.
Step 5
Click **Add to My Journals**

Step 6
On your alerts page, **Turn ON** the email option
